

Red to Green Framework

[Home](#) » [Public Health Orders and Executive Orders](#) » Red to Green Framework

New Mexico, let's move from **Red** to **Green**.

The county-by-county framework will permit counties – and the businesses and nonprofit entities within their borders – to operate under less restrictive public health measures when health metrics demonstrating the extent of the virus' spread and test positivity within those counties are met.

[READ THE PUBLIC HEALTH ORDER](#)

Select Language ▼

What is the Red to Green framework?

In order to prevent and mitigate the effects of the spread of the virus, and to ameliorate the unsustainable resultant strain placed upon the state's health care system and personnel, counties where the virus is more prevalent will operate under more restrictive

Select Language ▼

health measures. Likewise, counties where the virus has been or is being suppressed will operate under less restrictive measures. Counties will operate under one of four levels: Red, signifying very high risk; Yellow, signifying high risk; Green, signifying medium risk; and Turquoise, signifying low risk.

Red Level

VERY HIGH RISK

Counties at the Red Level are those with all of the following: 1) a new COVID-19 average daily case incidence rate of greater than 10 cases per 100,000 inhabitants during the most recent two-week period, 2) an average percent of positive COVID-19 test results over the most recent 14-day period greater than 7.5%, and 3) a fully vaccinated rate below 35%.

Yellow Level

HIGH RISK

Counties at the Yellow Level are those who have one of the following; 1) a new COVID-19 average daily case incidence rate of no greater than 10 cases per 100,000 inhabitants during the most recent two-week period, 2) an average percent of positive COVID-19 test results no greater than 7.5%, or 3) a fully vaccinated rate at or above 35%.

Green Level

Select Language

▼ **DIUM RISK*****

Counties at the Green Level have two of the following; 1) a new COVID-19 average daily case incidence rate of no greater than 10 cases per 100,000 inhabitants during the most recent two-week period, 2) an average percent of positive COVID-19 test results no greater than 7.5%, or 3) a fully vaccinated rate at or above 35%.

Turquoise Level

*****LOW RISK*****

Counties at the Turquoise Level have three of the following or two of the following in two consecutive reporting periods; 1) a new COVID-19 average daily case incidence rate of no greater than 10 cases per 100,000 inhabitants during the most recent two-week period, 2) an average percent of positive COVID-19 test results less than or equal to 7.5%, or 3) a fully vaccinated rate at or above 35%.

What are the restrictions at each level?

In an effort designed to provide local communities the flexibility to operate more day-to-day activities, the state of New Mexico will transition to a tiered county-by-county COVID-19 risk system on Dec. 2, enabling local communities to shed burdensome restrictions as soon as public health data show the virus is retreating within their borders.

COVID-19 Average Daily Case Rates and Test Positivity, Vaccination Rates New Mexico Counties, April 6, – April 19, 2021

Due to the instability in 14-day rates experienced by small counties, we used a 6250 population for counties with less than 5000 population. Those counties are indicated by an asterisk ().

At the request of the Economic Recovery Council, the Mayor's Council, the Modeling Team, and the Governor, we are looking to update our approach to consider the effect of new factors that were not present in July of 2020 when the framework was developed. These factors include vaccine availability and full school reopening.

In addition, to counter the potential instability of the cases/day/100,000 metric in counties with less than 6,250 population, during this interim period we will calculate this metric assuming that the following 7 counties have a population of 6,250:

Catron, DeBaca, Guadalupe, Harding, Hidalgo, Mora, and Union. Our intent is to stabilize potentially dramatic changes in these counties from a small number of cases.

The 6,250 population number would allow any county at or below 6,250 population to have up to **7 cases in a 14 day period** and still be at or below 8 cases/day/100,000 population.

How can I help?

COVID put us ALL in a bad spot. Many of our communities have very high positivity rates. It's up to all of us to do our part to keep our loved ones safe.

Get Tested

Knowing whether or not you're infected with coronavirus can help protect not only your own health, but the health of our entire community — so it's important to get tested if you think you have COVID-19.

Social Distance

If you are sick with COVID-19, have symptoms consistent with COVID-19, or have been in close contact with someone who has COVID-19, it is important to stay home and away from other people

Wear a Mask

Everyone is required to wear a mask or cloth face covering when in public except when drinking, eating, or under medical instruction. Masks and cloth face coverings may prevent people

[Select Language](#)

who do not know they have the virus from transmitting it to others.

Follow COVID Safe Practices

Living in a COVID-positive world requires discipline from all of us. In order to decrease the spread of COVID-19, allowing businesses, restaurants, and schools to reopen safely, it is imperative we adhere to COVID safe practices.
